Finding roles a student can apply for

Final-year students spend time opening listings before they know whether they qualify or which skills they need.

Eligibility	Minimum CGPA and branch rules can rule out an otherwise attractive job.
Deadlines	Expired roles waste time and can obscure openings that are still accepting applications.
Skill fit	A job title tells students little about which required skills they have or need to build.

The live demo

My Profile

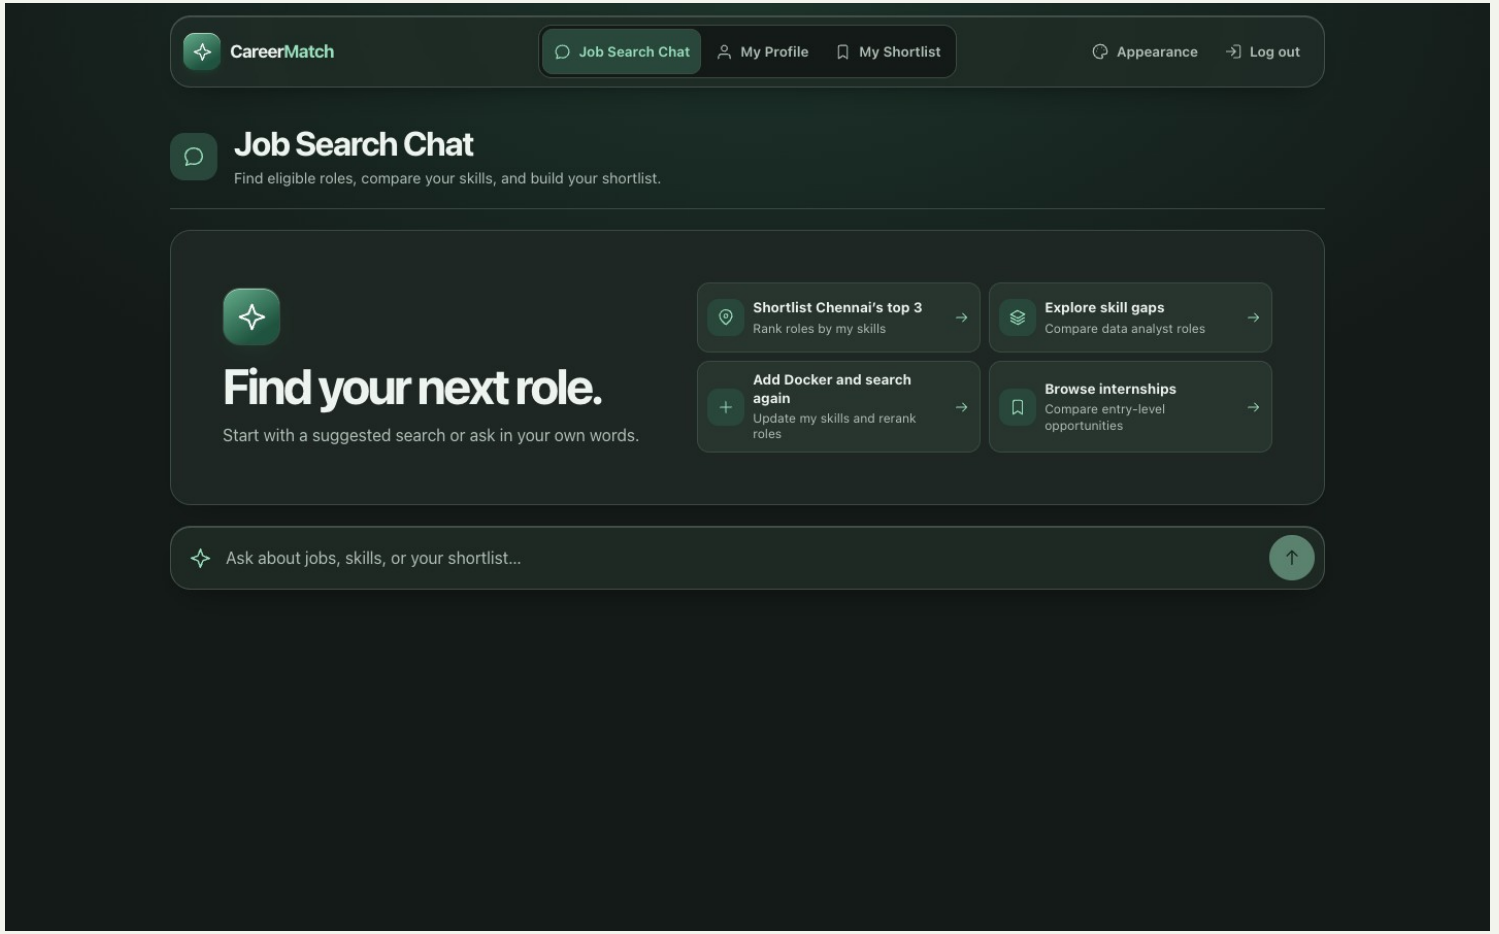

Start with the seeded student’s branch, CGPA and skills.

Job Search Chat

Ask for the top three jobs in Chennai, then open Agent activity to see what Gemini did.

My Shortlist

Check saved roles and draft a cover note for one of them.

How the agent works

1. Student request	A signed-in student asks for help. Next.js passes the request and tool declarations to Gemini.
2. Tool selection	Gemini chooses the tools and supplies arguments. Zod validates the arguments before execution.
3. Supabase reads	Tools load the profile, search eligible listings and score required-skill coverage.
4. Supabase writes	The shortlist tool rechecks eligibility. The skill tool updates the student’s profile when asked.
5. Results	Gemini uses tool results to reply. CareerMatch shows ranked cards and the calls it actually ran.

Verified results and links

Six Gemini tools

In local verification, Gemini shortlisted three Chennai jobs, added Docker, searched again, and drafted a cover note for a saved role.
